On Mar 11, 2004 this sequence version replaced gi:21396538.
Genes were predicted from the integrated results of the following: Gens were predicted from the integrated results of the following: GENSCAN (http://ccR-081.mit.edu/GenSM2K/N.mtml), FGENESH
(http://www.igfrc.org/tdb/glimmerm/glmr.form.html), FGENESH
(http://rgp.dna.affrc.go.jp/RiceHWM/), SplicePredictor
(http://rgp.dna.affrc.go.jp/RiceHWM/), SplicePredictor
(http://rgp.dna.affrc.go.jp/RiceHWM/), SplicePredictor
(http://rgp.dna.affrc.go.jp/RiceHWM/), SplicePredictor
(http://rgp.dna.tigr.org/software/glimmerm/), BLASTN and BLASTN. The
genomic sequence was searched against NCBI NonRedundant Protein
database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA
sequence database at RGP or DDBJ. Protein homologise of the coding
regions were searched against NCBI NonRedundant Protein database
with BLASTN with the corresponding DDBJ accession no. and RGP clone ID.
Pull-length cDNAs represent the identified cDNA sequences using
BLASTN with the corresponding DDBJ accession no.
A gene with identity or sugainst DDBJ accession no.
A gene with identity or protein name to indicate the homology level
such as same name, 'putative-' and 'like protein. A gene without
significant homology to any protein but with full-length of partial
sequence) is classified as an 'unknown' protein. A gene predicted
by two or more gene prediction program is also classified as
'hypothetical' protein according to IRGSP standard. A gene
predicted by a single gene prediction program is also classified as
'hypothetical' protein according to IRGSP standard. A gene
predicted by a single gene prediction program is also classified as
'hypothetical' protein according to IRGSP standard.
This sequence of P0693B08 clone has an overlap with P0005C08 (DDBJ

A gene with identity or significant homology to a protein in a same meme. '
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The orientation of the sequence is from 17 to SP6 of the PAC clone. This sequence of P0562A06 clone has an overlap with OJ1150 Al1 (DDBJ: AP003928) clone at 5' end and with P0604E01 (DDBJ: AP065544) clone at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HGGGGYPSSTYPPPPSSSQAYPMGMGGFLVFPPGTHPDVERAFRAVDRDGSGSIDER

On Jan 23, 2004 this sequence version replaced gi:27374998.

Genes were predicted from the integrated results of the following: Genes were predicted from the integrated results of the following: GENSCAN (http://CCR-081.mit.edu/GeneMark.hmm (http://www.softberry.com/), GeneMark.hmm (http://www.softberry.com/), GeneMark.hmm (http://www.softberry.com/), GeneMark.hmm (http://ppal.biology.gatech.edu/GeneMark.hmm), RiceHMM (http://ppal.biology.gatech.edu/GeneMark.hmm), RiceHMM (http://ppal.affrc.go.jp/RaceHMM/), SplicePredictor (http://ppoln.cse.psu.edu/html/docs/sim4.html), gap.cgi), sim4 (http://plobln.cse.psu.edu/html/docs/sim4.html), gap2 (http://www.tigr.org/software/glimmerm/), BlaSrN and BlaSrN. The genomic sequence was searched against NCBI NonRedundant Protein database at RGP or DDB4. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BlaSrP. ESTS represent the identified cDNA sequences using BlaSRN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using

BLASTN with the corresponding DDBU accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial by two or more gene prediction programs is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard' A gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /translation="mgnggssgtlshsstveklyawekklflevkcsvasvsMicaml

                                                                                                                                                                                                                                                                                                                                                                                                       The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of B1274F11 has an overlap with P0229B10(DDBJ: AP006174) clone at 5' end and with P0478E02(DDBJ: AB109206) clone at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           complement(join(4036. .4453,4559. .4690,4807. .5160,

                                                                                                      commuter, iterimi-zovi, temmson university denomics institute, clemson University, 100 Jordan Hall, Clemson, SC 29634, USA On Mar 20, 2001 this sequence version replaced gi:1012028.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality as compressions and repeats: all regions were covered by at least one plasmid subclone or more than one M13 subclone: and the assembly was confirmed by restriction digest. Within the assembly from 57011-57037 there are unresolved GC compressions.

prediction programs including Egenesh (http://www.softberry.com/), genesan and Genesan+ (Chris Burge, http://www.softberry.com/), http://CCR-081.mit.edu/GENGCAN.html), GeneMarkHDM (Mark Borodovsky, http://GCR-081.mit.edu/GENGCAN.html), GeneMarkHDM (Mark Borodovsky, http://Genemark.biology.gatech.edu/GeneMark/), and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@itjer.org/, searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tgi.shtml). Annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE)). Simple repeats are identified by repeatmasker (Arian Smit, http://genome.wustl.edu/eddy/tRNAscan-SE)).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chow, T.Y. and Harng, Y.-1.C.

Direct Submission

Submitted (02-APR-2004) Institute of Botany, Academia Sinica, 128, Section 2, Academia Road, Mankang, Tabjea 11529, Taiwan

On Jul 2, 2003 this sequence version replaced gi:3218941.

The orientation of the sequence is from Sp6 to T7 of the BAC clone. Genes were predicated from the integrated results of the BAC clone. BLASTA2.0, GENSCAN (Chris Burge, http://genes.mit.edu/GENSCAN.html), Fgenesh (http://www.rigr.org/softlab/glimmer/glimmer.html), TWINSCAN (http://www.tigr.org/softlab/glimmer/glimmer.html), TWINSCAN (http://www.tigr.org/softlab/glimmer/glimmer.html), TWINSCAN (http://www.tigr.org/softlab/glimmer/glimmer.html), TWINSCAN (http://www.tigr.org/softlab/glimmer/glimmer.html), TWINSCAN (http://www.tigr.org/tdh/Genesplicer/index.shtml), TWINSCAN (http://www.tigr.org/softlab/glimmer/glimer.html), TWINSCAN (http://www.tigr.org/softlab/glimmer/glimer.html), TWINSCAN (http://chaol.dna.affrc.og.jp/cDNA/). Annotated genes are named to laill-length cDNA database (KoME, http://chaol.dna.affrc.go.jp/cDNA/). Annotated genes with similarity are named as unknown proteins. Genes without proteins are named after the database hits. Genes without are proteins are named after than two gene prediction programs over most of their length are annotated as hypothetical proteins. This clone overlaps with P0683B02 (accession # AC135927) and OsJNBa0090002 (accession # AC137618).
                                                                                                                                                    Oryza sativa (japonica cultivar-group)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                             The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     t t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             404 GCGGCTAGGAGCAGTGCTGGTAGAGAGTACAATAAG-CCTAGTCAGCTGGCGGCAAAA 346

                                                                                                                                                                                                      Transmittor describes a mover purities of the polymuclectide and a vector encoding it are useful for andifferase homologue from a ryegrass (Lolium sp.) or fescue (Festuca sp.). The polymuclectide and a vector encoding it are useful for amodifying fructan biosynthesis in a plant.

Regulatory elements isolated from the gene are useful for expressing an exogenous gene in plant cells. The nucleic acid is useful as a molecular genetic marker for qualitative trait loci (QTL) tagging, QTL mapping, DNA fingerprinting and in marker assisted selection, in forage and turf grass improvement, e.g. tagging QTLs for dry matter digetibility, herbage culting and grazing, cold tolerance, drought tolerance, tiller survival and plant persistence. Modification of fructan biosynthesis leading to fructan accumulation fructans produced by the plants are also useful as low calorie sweeteners. This the genomic DNA sequence encoding the Lolium perenne fructans transferase homologue, Lofskri, isolated from perennial ryegrass using an Lp66FrI cDNA probe, described in the method of the invention. Note: This sequence differs from Lp65FII version I (AAS20019)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8049 CTAGTIGGAGGAGAGATAGGAGGAGAGA-ATGTGAGTATGCTCTTATGCAAGAGCTAG 8107
                                            Novel nucleic acid encoding fructosyl transferase homolog from ryegrass or fescue species useful for modifying fructan biosynthesis in plants and

The invention describes a novel purified or isolated nucleic acid or its fragment encoding a fructosyl transferase homologue from a ryegrass (Icolium sp.) or fescure (Restuca sp.). The polynucleotide and a vector encoding it are useful for modifying fructan biosynthesis in a plant. Regulatory elements isolated from the gene are useful for expressing an exogenous gene in plant cells. The nucleic acid is useful as a molecular genetic marker for qualitative trait loci (QTL) tagging, QTL mapping, DNA fingerprinting and in marker assisted selection, in forage and turf grass imperprinting and in marker assisted selection, in forage and turf grass improvement, e.g. tagging QTLs for dry matter digestibility, herbage (unality, palatability, regrowth after cutting and grazing, cold tolerance, drought tolerance, tiller survival and plant persistence. Modification of fructan biosynthesis leading to fructan accumulation fructans produced by the plants are also useful as low calorie sweeteners. This the genomic DNA sequence encoding the Lolium perenne reconstructory transferase homologue, Ip6SFT1, isolated from perennial ryegrass using an Lp6SFT1 cDNA probe, described in the method of the invention. Note: This sequence differs from that of Lp6SFT1 version 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acid encoding fructosyl transferase homolog from ryegrass or fescue species useful for modifying fructan biosynthesis in plants and as a molecular genetic marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 9539 BP; 2085 A; 2602 C; 2397 G; 2369 T; 0 U; 86 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4.3%; Score 47.8; DB 6; Length 9539; 62.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to plant nucleotide sequences that direct seed-, leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential or constitutive transcription of an operatively linked nucleic acid segment. The invention also relates to a method for augmenting a plant genome and a method of identifying a gene, where its expression is attered in the seed, leaf, stem, panicle, pollen, root or is constitutive in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower, canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New rice promoter, useful for manipulating crop plants to alter or improve phenotypic characteristics, e.g. produce large quantities of oil or proteins, resistance to insecticides, virus or fungi, stress tolerance or high nutritional value.

ä
sorghum, rice or wheat. The polynucleotides and the polypeptides they encode are useful for manipulating crop plants to alter or improve phenotypic characteristics, to produce large quantities of oil or proteins, to incur resistance to insecticides, viruses or fund; and to incur stress tolerance (e.g. salt, cold or drought) to ensure the plants have a high nutritional value with reduced apical dominance or dwarfism, early flowering or alterered metabolic pathways. This sequence represents a plant nucleic acid of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

useful for conferring resistance to resistance or tolerance to a plant to

```
polynucleotides comprising a nucleotide sequence encoding a protein which is involved in or associated with the synthesis, metabolism or degradation of carbohytates in the plant grain and the expression of which is up-regulated during grain filling. The plant is selected from corn, tomato, banana, canola, cotton, peanut, sorghum, tobacco, sugarbeet, wheat, and rice. The invention may be useful for the improvement of protein, oil, starch, fibra and moisture content of the cereal grains. In addition, carbohydrate levels may be modified to a more desirable level using the present invention. The present sequence is a DNA sequence of a rice gene promoter. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fite, wipo.int/pub/publishedpct_sequences.
                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               t t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic inffection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected blant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is
                                                                                                                                                                                                                                                                                                                                                                       687

The invention relates to a polynucleotide isolated from chromosome 11 of Indica rice cultivar C039, flanked by marker R2316 and RG1094 comprising one or more genes that confer resistance to strains of Magnaporthe grisea having avirulence gene AVR1-C039. The pi-C039(t) polynucleotides are useful for conferring or improving resistance of plants to strains of the rice blast pathogen, Magnaporthe grisea and other pathogens. The Pi-C039(t) nucleic acids may be used as probes to detect the presence of and/or expression of Pi-C039(t) genes, and to products of Pi-C039(t) proteins. Purified gene products of Pi-C039(t) are useful in producing polyclonal or monoclonal antibodies useful as sensitive detection reagents for the presence and accumulation of Pi-C039(t) properties. The transgenic plants are useful for plant breeding or directly in agricultural or horticultural applications. The present sequence is BAC clone E2P5 from rice variety C039
                                                                                                                                  o;

This invanion relates to novel polymucleotides encombinant and synthetic methods for producing human polymucleotides, polypeptides and antibodies. Purthermore, it relates to screening methods to identify agonists and antibodies. Purthermore, it relates to screening methods to identify agonists and antagonists that can be used to inhibit or enhance the production and function of the secreted proteins. The present invention describes these compositions as useful for diagnosing, treating or proventing disorders such as cancer, hematopoletic diseases including anaemia and multiple myeloma, reproductive system disorders including prostatitis and inguinal hernia, musculoskeletal diseases including carpythmia and hypernatraemia, mixed fetal diseases including fetal alcohol syndrome and bown's syndrome, excretory disease including carpythmia and hypernatraemia, mixed fetal diseases including fetal alcohol syndrome and occupational lung disease, endocrine diseases including Alzheimer's disease and meningitis, respiratory disease.

New isolated nucleic acids and polypeptides, useful for diagnosing, treating, preventing or ameliorating diseases or disorders e.g. cancer, anemia, arthritis, asthma, inflammatory bowel disease or Alzheimer's disease.

Disclosure; SEQ ID NO 460; 286pp; English.

This invention relates to novel polynucleotides encoding human secreted and synthetic methods for producing human polynucleotides, polypeptides and synthetic methods for producing human polynucleotides, polypeptides and antibodies. Furthermore, it relates to screening methods to identify agonists and antagonists that can be used to inhibit or enhance the production and function of the secreted proteins. The present invention describes these compositions as useful for diagnosing, treating or preventing disorders such as cancer, haematopoietic diseases including prostatitis and multiple myeloma, reproductive system disorders including prostatitis and inguinal hernia, musculoskeletal diseases including systemic lupus erythematosus and gout, cardiovascular disease including arrhythmia and hypernatraemia, mixed fetal diseases including alcohol syndrome and Down's syndrome, excretory diseases including urinary incontinence and renal disorders, neural or sensory disease

including Alzheimer's disease and meningitis, respiratory disease including emphysema and occupational lung disease, endocrine diseases including diabetes and glomerulonephritis, digestive diseases including portal hypertension and irriteable bowel syndrome and connective tissue or epithelial diseases including scleroderma and epidermolysis bullosa. As such, there are various activities such as extostatic, antianemic, antianteric, antiasthmatic, anti-HIV, immunosuppressive, antianemic, antibacterial, osteopathic, dermatclogical, antigout, immunomodulator, antiarrythmic, cardiant, noctropic, antilpemic, nephroropic, antidiabetic, anabolic, hypertensive and vulnerary. This polymucleotide is a DNA fragment of a BAC clone that encodes a human secreted protein of the invention. NOTE: This sequence doces not appear in the printed specification but has been obtained in

(first entry) 01-APR-2003 ABX14763;

Genomic DNA encoding novel human ras-like protein.

Ras-like protein; pharmacogenomic analysis; tissue typing; human; transgenic; ribozyme design; gene therapy; alternative splice form; gene;

Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                          The invention describes an isolated movel human Ras-like polypeptide (I).

The polypeptide is useful for identifying a modulator of (I), by

CC contacting (I) (I), or the nucleotide (I) encoding it, are useful as

CC adeals for the development of human therapeutics, for identifying

CC therapeutic proteins, and as targets for development of human therapeutic

CC degents. (I) is useful as a reagent in assays designed to quantitatively

CC tissues in which the corresponding protein is preferentially expressed,

CC tissues in which the corresponding protein is preferentially expressed,

CC in drug screening assays, to identify compounds that modulate human Ras-

CI ike protein, or an altered form that causes the specific disease or

pathology associated with the protein, to screen a compound for the

CC abhlity to stimulate or inhibit interaction between the Ras-like protein,

CC abhlity to stimulate or inhibit interaction between the Ras-like protein,

CC abhlity to stimulate or inhibit interaction a disorder characterised by

Altered expression of the human Ras-like protein. (II) is useful to

detect the presence of (I) in cells or tissues, to assess abnormal tissue

CC detect the presence of (I) in cells or tissues, to assess anormal tissue

CC detect the presence of (I) in cells or tissues to abnormal expression

during development or progression of a biological condition, to assess

CC normal in pharmacogenomic analysis, for tissue tryping, as diagnostic

C tools, and for inhibiting a protein function. (III) is for expressing

C recombinant vectors, host cells and transgenic animals, for expressing

Thormal and particular the affertivenes of the human Ras-like proteins, for designing

C the contractions of the human Ras-like proteins, for designing

involved in plant resistance or response to pathogenic infection. Mill comprises identifying a gene whose expression is significantly altered in the incomparatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CAATTTATCTTTGGGGAGGCGGGCCGGGATTGGAGACAGAGCCCACAAGGCAACAAA 1060

This invention, in the area of plant biotechnology, relates to novel polynucleotides comprising a nucleotide sequence encoding a protein which is involved in or associated with the synthesis, metabolism or carbohydrates in the plant grain and the expression of which is up-regulated during grain filling. The plant is selected from corn, tomato, banana, canola, cotton, peanut, sorghum, tobacco, sugarbeet, wheat, and rice. The invention may be useful for the improvement of protein, oil, starch, fibre and moisture content of the cereal grains. In addition, carbohydrate levels may be modified to a more desirable level using the present invention. The present sequence is a DNA sequence of a rice gene promoter. Note: The sequence data for this peter did not form part of the printed specification, but was obtained fire.wipo.int/pub/publishedpct_sequences.
                                                                                                                                                  New plant genes encoding polypeptides having an activity involved in or associated with the synthesis, metabolism or degradation of carbohydrates in the plant grain useful in generating plants having improved nutritional properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        transposable element; rice; mPing/Pong; transposase; transgenic; plant;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated polypeptide (I) associated with breast cancer which is encoded by a nucleic acid molecule comprising a nucleotide sequence (SI). Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention as early a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful for a marker for breast cancer and in breast cancer therapy. Sequences given in records ACNY8851-ACN92934 represent mucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.thml?DocID=20030099974
